## Clean Version Of The Pending Claims Under 37 C.F.R. 1.121(c)(3):

Claims 1-6 and 22-26, now pending, are submitted below in accordance with 37 C.F.R. §1.121(c)(3), which presents a clean version of the entire set of pending claims in this single amendment paper.

1. An assembly comprising:

a device constructed in a form factor of a PCMCIA card, the device having an interface to communicate with a storage card and memory to store user data; and

a removable storage card associated with a user that alternately enables access to the user data on the memory when interfaced with the device interface and disables access to the user data when removed from the device.

- 2. An assembly as recited in claim 1, wherein the storage card comprises a smart card.
- 3. An assembly as recited in claim 1, wherein the memory comprises flash memory.
- 4. An assembly as recited in claim 1, wherein the device stores a user's profile that can be used to configure a computer.
- 5. An assembly as recited in claim 1, wherein the storage card stores a passcode and access to the user data in the memory of the device is enabled upon

authentication of a user-supplied passcode to the passcode stored on the storage card.

6. An assembly as recited in claim 1, wherein the device stores a public key and the storage card stores a corresponding private key and access to the user data in the memory of the device is enabled upon verification that the public key and the private key are associated.

22. A computer system, comprising:

a computer having a PCMCIA device reader; and

a smart card secured memory assembly having a form factor of a PCMCIA card to compatibly interface with the PCMCIA device reader in the computer, the smart card secured memory assembly having data memory to store user data and a removable smart card that alternately enables access to the user data when present and disables access to the user data when removed.

- 23. A computer system as recited in claim 22, wherein the data memory comprises flash memory.
- 24. A computer system as recited in claim 22, wherein the smart card stores a passcode and is configured to authenticate a user-supplied passcode entered into the computer as a condition for enabling access to the user data.
  - 25. A computer system as recited in claim 22, wherein: the smart card stores a first key;

the data memory stores a second key that is associated with the first key; and

the smart card is configured to authenticate the second key from the data memory using the first key as a condition for enabling access to the user data.

26. A computer system as recited in claim 22, wherein:

the smart card stores a passcode and a private key of a public/private key pair;

the data memory stores a public key of the public/private key pair; and
the smart card is configured to authenticate a user-supplied passcode
entered into the computer as a condition for enabling access to the private key and
to authenticate the public key from the data memory using the private key as a
condition for enabling access to the user data.
